Top Thesis Prize in the Department of Urban Studies and Planning, MIT

The A.I.A. Henry Adams Medal for the Highest Academic Ranking in the Bachelor or Architecture Program

Magna Cum Laude, Syracuse University

Meli Harvey

Architect, urban planner, professor, artist, computational designer, citizen mapper

New York City Metropolitan Area

Summary

www.meliharvey.com

Meli is committed to making the process of urban development more inclusive and sustainable. Her focus is rethinking how the relationship between land use, mobility, and public realm design can create healthy communities and mitigate climate change.

Amelia (Meli) has a background in urban planning, regional planning, public policy, architecture, computational design, software development, web development, entrepreneurship, digital fabrication, and sculpture. This combination of experiences has given her a trans-disciplinary approach to problem solving that's equally rooted in design, policy, and product development.

Experience

Computational Design Consulting, Freelance Web-based Visualizations and Experiences

September 2023 - Present (10 months)

Google

Senior Computational Designer on Delve

January 2022 - September 2023 (1 year 9 months)

New York, New York, United States

I managed a team of Computational Designers to help build a generative design system for Delve. As the senior-most Computational Designer at Google, I lead the effort to formalize the Computational Design role as a part of UX Engineering.

Sidewalk Labs

Senior Computational Designer on Delve

February 2020 - January 2022 (2 years)

Greater New York City Area

WeWork
Senior Computational Designer
July 2019 - October 2019 (4 months)
New York City

KPF
Urban Planner and Computation Specialist
November 2017 - June 2019 (1 year 8 months)
Greater New York City Area

As part of the computation and research team Urban Interface (KPFui), I'm exploring how data science can better inform architecture and masterplanning projects. Making the case for sustainable, livable and dense urban environments means not just using data, but translating it into useful metrics and visualizations. My job includes data scraping, data visualization, GIS, web mapping, web development, tool building, product testing, urban design, masterplanning, paper writing, and teaching.

Columbia University in the City of New York
Assistant Adjunct Professor
January 2019 - May 2019 (5 months)
Greater New York City Area

Taught Algorithms & Urbanism, a data science course for urban planners and designers that investigates how data can inform urban policy and design.

Civic Data Design Lab
Product Design and Development
January 2016 - June 2017 (1 year 6 months)
Cambridge, MA

I worked on a web-app called the Atlas of Lighting, which is an interactive mapping too that compares Nasa's Nighttime Lights dataset with various other economic and social metrics. I was responsible for processing and compiling geospatial datasets for use in the web-app. This involved extensive use of python, ArcGIS, and modelbuilder. I also worked on UX/UI by generating wireframes and working with the development team on front-end development.

Regional Plan Association
GIS Specialist
June 2016 - July 2016 (2 months)
Greater New York City Area

I developed a build-out analysis of the central Hudson River Valley to determine the carrying capacity of the region based on current zoning laws.

This task required analyzing municipal zoning laws in the region, digitizing them, and then creating an algorithm that could determine the number of buildable units per each parcel of land. I used GIS, model builder, and python to develop this model.

MIT Norman B. Leventhal Center for Advanced Urbanism
Assistant Researcher
September 2015 - January 2016 (5 months)
Cambridge, MA

I edited the publication called Infinite Suburbia, a 1,200 page anthology of past and original work by 55 contributing authors. With suburban development accounting for much of the world's recent "urbanization," this book draws on a rich history of suburban studies while laying the foundation for how to conceptualize suburbanization for the future. A diverse set of authors generate a wide ranging discussion including urban planning, environmental planning, health, demographics, mobility, history, and social justice.

BIG - Bjarke Ingels Group
Designer
November 2012 - July 2015 (2 years 9 months)
New York, NY

My primary role was as a designer and BIM leader working on multiple commissioned projects from concept design through CD phases. These include a 60 story mixed-use tower in Calgary, CA, and a 233 unit apartment building in Manhattan, NY. My other important role was as an in-house computational designer. Through this role I worked on numerous projects offering 3D modeling and construction solutions using computational tools, such as grasshopper and dynamo. Part of this role included teaching courses on computational design skills. I also worked as the model shop manager and directed the construction of numerous models, including one presentation model displayed at the National Building Museum.

PARA project
Junior Architect
July 2012 - October 2012 (4 months)
New York, NY

Diana Al-Hadid Studio
Digital Fabrication Specialist
November 2011 - May 2012 (7 months)

Medium Architects
Intern Architect
October 2011 - November 2011 (2 months)
New York, NY

Stenson Building + Furniture Design
Intern Architect
January 2008 - February 2011 (3 years 2 months)

Bertaux + Iwerks Architects
Intern Architect
June 2008 - August 2010 (2 years 3 months)
Boston, MA

I interned with Bertaux + Iwerks Architects for three summers. My work included schematic design (university master planning, apartment building), construction document production (university building renovations), and marketing.

Education

Massachusetts Institute of Technology
Master in City Planning, City/Urban, Community and Regional Planning · (2015 - 2017)

2006-2011 Syracuse University School of Architecture
Bachelor, Architecture

2010 Syracuse University Florence

2011 Syracuse University London
